

The advertisement features a large background image of a helicopter in flight, carrying a red fire bucket suspended by a cable, positioned over a body of water. The sky is filled with white clouds. The image is divided into three main color sections: an orange section on the top left, a blue section on the bottom left, and a white section on the right. The text 'AERIAL FIRE SUPPRESSION EQUIPMENT' is written in white, bold, uppercase letters in the orange section. The logo for 'CLOUDBURST FIRE BUCKET' is in the blue section, featuring a stylized helicopter icon. The text 'a product by IMS' is below the logo. The website 'imsheli.com' is at the bottom in a dark blue bar.

Cloudburst Fire Bucket

Configuration 1

Short Line

In-line Air Compressor

The **Cloudburst Fire Bucket** has been designed to be strong, simple, lightweight, and extremely effective and is being utilized throughout the world achieving superior aerial fire suppression results.

with Monsoon Valve

Configuration 2

Configuration 2 offers a **Compressor Module** that sits inside the aircraft and provides compressed air supply to the Cloudburst Bucket. This module can have a corded remote control to operate the bucket by crew members. It also can be coupled with our **Power Control Module**, which provides an auxiliary power supply to operate the entire system. Many combinations can be used to accommodate the needs required to operate your **Cloudburst Fire Bucket**.

**A modern
and reliable
approach to
aerial fire
suppression.**

Keeping it
simple and
effective.

Cloudburst Features

The **Cloudburst Fire Bucket** continues to be selected for many military and civilian operations around the world for its modern features, reliability and accuracy which is all backed up by a fast acting global support team.

The bucket is made of a tough and durable fabric, an industry recognized super material that is durable yet flexible. It is strong, load bearing, and impact resistant, while also able to withstand high operating temperatures. The same material is used by the US Navy and US Coastguard because it is non-marking, has good UV stabilization and strongly resists the growth of algae and fungus.

The **Flexible Folding Ring** ensures the **Cloudburst Fire Bucket** retains its shape and flight characteristics and filling operation during use.

Stainless Steel Lift Lines and **Lift Cleats** to withstand a high level of abrasion and the various water sources used to fight fires.

Optional Shallow-Fill Pump used when water sources are not deep enough. Minimum depth 0.16m or 6.3 inches

Air supplied from either an approved turbine compressor modification or one of **Cloudburst Air Supply Systems**, will ensure that the **Monsoon Valve** is charged and ready to operate at any stage of flight

Optional The Foam Injection System is available across the range of models and simply attaches to the top of the bucket wall offering a simple, effective, and reliable foam injection system.

Monsoon Valve

Utilizing pneumatics to actuate the **Monsoon Valve**, we are able to achieve a very fast and accurate water drop throughout the range of **Cloudburst Bucket** sizes.

The multi drop capability is precise with the **Monsoon Valve**, and its simplicity makes maintenance and field servicing easy.

The Monsoon Valve can be configured to default to either open or closed if electrical power is lost for any reason.

If default to open is selected, this can be seen as a safety aspect of the Cloudburst Fire Bucket by many pilots.

Shallow Fill Pump

Monsoon Valve head, housing air receiver.

Fast valve actuation for precise multi drop capability without compromise.

Stainless steel corrosion resistant valve and body with multi drop as standard provides a column of water for concentrated fire attack with an attachment available for a conical pattern for a more broad coverage.

Accessories

Optional accessories available for the **Cloudburst Fire Bucket** range

Foam Injection

Attached to the side wall of the **Cloudburst Fire Bucket**, the **Foam Injection System** can deliver a timed volume of foam to the water within the bucket and is agitated during the water release by our unique pneumatic valve operation.

Foam Controller

The optional **Foam Controller** ensures the quantity of foam being injected into each load of water is accurate and consistent.

Long Line

Long Line systems are configured specifically for the bucket and helicopter combination, with all necessary service lines built into the zipped cover of the long line. The **Long Line** is available in your choice of length to suit your operation.

In-Line Compressors

The **In-Line Compressors** offer a lightweight and compact solution to the requirement for compressed air supply to the bucket. The unit is mounted in line and is jettisonable, requiring only electrical input from the helicopter. Systems are available for use with and without a long line fitted.

Shallow Fill Pump

Developed to be both effective and easy to use, the 28VDC, 50 amp **Shallow Fill Pump** is built into the valve of the **Fire Bucket** giving it good mechanical protection when the bucket is manoeuvred into tight spaces for filling. With a filling rate in excess of 25 Liters (6.6 gallons) per second per pump, and a minimum filling depth required of 0.16 meters (6.3 inches), the **Shallow Fill Pump** is a vital tool when available water sources are limited.

Optional pump is our 208VAC, 50 amp, 400HZ, 10hp pump at a flow rate of 100 Liters (26 gallons) per second.

Power Distribution Module

Powered by the aircraft electrical power, the **Power Distribution Module** is a fully integrated system giving you full control of all systems on your **Cloudburst Fire Bucket** including **Monsoon Valve** control, **Foam Injection** timing and **Shallow Fill Pump** control.

Compressor Module

The **Compressor Module** supplies the **Monsoon Series** with the necessary air supply to operate the **Multi Drop Valve**. With an air accumulator inside this unit coupled with an accumulator built into the valve, there is always a large store of compressed air to operate the bucket systems regardless of the stage of flight when bucket actuation is required. This Module can also incorporate control if required. Discuss with supplier.

Power and Control Module

The Module has been designed to provide an auxiliary power supply and control to operate the **Cloudburst Fire Bucket** and associated accessories without the need to draw electrical power from the aircraft's electrical system.

Carry / Stowage Bag

Compact and tidy, all **Cloudburst Fire Buckets** up to and including the CB2000 come complete with a carry bag.

Achieve a
very fast and
accurate
water
drop.

The 21st century features of the **Cloudburst Fire Bucket** provide rapid dip filling or filling from our **Shallow Fill Pump**, fast valve operation, additive bladders attachable to the wall of the bucket to keep chemical clear of your aircraft and global spares and after sales support making the **Cloudburst Fire Bucket** a wise investment.
